RNN - Context

"fox jumped"  
long Memme

("

```
"The trophy did not fit in the suitcase because it was too big"
RNN reads it like this:
The - (memory: The) ✓
trophy - (memory: The trophy) ✓
did - (memory: trophy did) - 'The' is already getting blurry
not - (memory: did not) - 'trophy' fading fast
fit - (memory: not fit) ✓
... - ...
it - (memory: was it) ✓
was - ...
too - ...
big - (memory: too big)
QUESTION: What does 'it' refer to? The trophy or the suitcase?
RNN: ??? (memory too blurry to know)
```

IT - Directing:

= Vanishing Memory

= ① 1- 100  
2- sequant

sub, fit, it

Question: "The trophy did not fit because it was too big. It was huge."

Processing the word "it":

Q1: "What does 'it' refer to?"

K1: trophy: "I am a physical object" → match score: 0.87

K2: case: "I am a container" → match score: 0.03

K3: fit: "I am an action" → match score: 0.04

The model knows 'it' refers to 'trophy' - resolved in ONE STEP

= Trophy did not fit, it

= Process = Bas. - Relation

A = (Q) - what it is looking for? = where is (it) sitting

K - what do i contain: - (it) tag

V - cat, = cat, = Value.
